

Gene expression data across samples, showing various biological processes and pathways. The data is organized into a table with columns for gene names and rows for sample clusters. The gene names are listed on the left, and the sample clusters are listed on the right. The data shows a wide range of expression levels, with some genes being highly expressed in certain clusters and others being lowly expressed. The data is organized into a table with columns for gene names and rows for sample clusters. The gene names are listed on the left, and the sample clusters are listed on the right. The data shows a wide range of expression levels, with some genes being highly expressed in certain clusters and others being lowly expressed.
